

vattimalaysia.com is redirecting to www. Needs a Vercel domain fix today.

Prepared 14 September 2026 · For: whoever has access to the Vercel project and Google Search Console

What is wrong

Since the new site went live, every request to `https://vattimalaysia.com/...` returns a 308 redirect to `https://www.vattimalaysia.com/...` Everything else about the site says the bare domain is the real one:

- the sitemap lists bare-domain URLs
- every page's canonical tag points to the bare domain
- robots.txt declares `Host: vattimalaysia.com`
- the Search Console property is `https://vattimalaysia.com/`, and all 10.8k organic clicks over the last 90 days landed on bare-domain URLs

So Google is being told "the real page is X" and then redirected away from X. The code is correct. The redirect is coming from the Vercel domain settings, not from the repository.

Why it matters

If this stays, all 241 pages in the sitemap will flip to "Page with redirect" in Search Console, rankings will start splitting between the two hosts, and www traffic will be invisible in our Search Console property.

Google's last crawls on 12 and 13 September still got a normal 200 on the bare domain, so the damage has not started yet. It will within days.

The fix (Vercel, no code change)

1. Open the Vercel project → **Settings** → **Domains**.
2. Make sure `vattimalaysia.com` is the primary domain and is **not** set to "Redirect to" anything.
3. Set `www.vattimalaysia.com` to redirect to `vattimalaysia.com` (308 permanent).
4. Save. It takes effect immediately.

Do not fix this by changing the site to www. That would mean changing the sitemap, canonicals, robots.txt and the Search Console property, and throwing away the ranking history on the bare domain.

How to verify

```
curl -I https://vattimalaysia.com/
```

```
curl -I https://www.vattimalaysia.com/
```

Request	Today (wrong)	Expected after the fix
https://vattimalaysia.com/	308 → www	200
https://www.vattimalaysia.com/	200	308 , Location: https://vattimalaysia.com/

After it is fixed

- In Search Console, resubmit `https://vattimalaysia.com/sitemap.xml` .
- Use "Request indexing" on the home page and `/kitchen-hood-in-malaysia/` , our two biggest pages.
- Over the next week, watch the Pages report for "Page with redirect". The count should stay at zero.
